PROFESSIONAL SUMMARY

Computer Science student at the University of Washington Tacoma with hands-on Java, JavaScript, web API development, and SQL data analysis experience. Strong foundation in data structures, algorithms, object-oriented design, automated testing, and debugging, with practical leadership and analytical experience from a long-term management role.

EDUCATION

University of Washington Tacoma B.A. Computer Science & Systems | Expected Spring 2027
Relevant Coursework Java, SQL, Data Structures, Algorithms, Object-Oriented Programming, Software Design, Git/GitHub

SKILLS

Languages: Java, C++, JavaScript, Python, SQL, HTML/CSS
Tools: IntelliJ IDEA, Git, GitHub, JUnit, Java Swing
Concepts: Object-Oriented Programming, Data Structures, Algorithms, API Integration, Automated Testing, Debugging
Professional: Leadership, Team Collaboration, Analytical Problem Solving, Adaptability

PROJECTS

SQL Data Analysis Projects SQL | Skillbuilder Program
- Queried U.S. YouTube Trending data to rank video engagement and analyze category and timing patterns, using ORDER BY, LIMIT, and OFFSET to inform content optimization recommendations.
- Analyzed Crunchbase startup funding, company status, and industry trends using SQL conditional filters and ranking logic to identify high-potential and closed companies for venture investment evaluation.
- Analyzed 6,295 London transit records using SUM and multi-field GROUP BY to compare travel zones, commuting peaks, and tourism patterns; recommended peak-period service improvements.

Battleship C++ | Data Structures, CMake, CTest
- Built a console Battleship game using a custom array list for ship fleets and a circular queue for CPU targeting, with guided placement, side-by-side boards, sinking scores, and automated tests.

Full-Stack Expression Calculator Java, JavaScript, HTTP, JUnit | AI-assisted development
- Built a browser-based calculator with a vanilla JavaScript interface and a Java HTTP server, including input validation, decimals, negative values, division-by-zero handling, and operator precedence.
- Implemented custom array list, queue, and bounded stack structures; converted infix expressions to postfix notation and evaluated them with JUnit coverage.
- Used AI-assisted iteration to refine the architecture, documentation, and tests while personally reviewing and validating the implementation.

Lucky Seven Craps Casino Java
- Built a casino-style craps game featuring randomized dice logic, balance tracking, input validation, and a Java Swing interface.
- Applied object-oriented design and automated model testing to separate game rules from presentation behavior.

Data Structures and Implementations Coursework Java
- Implemented arrays, stacks, queues, recursive trees, and sorting algorithms using interfaces, generics, abstraction, and complexity analysis.

ICPC Regional Programming Competition Team Participant
- Collaborated in a three-person team to analyze and solve programming problems under timed competition constraints.

EXPERIENCE

Assistant Manager Mar 2019 - Present
1915 KC House SeaTac, WA
- Analyze labor, sales, and operational data while supporting a team of more than 20 employees.
- Optimized reporting spreadsheets, reducing recurring reporting time by approximately 50%.
- Developed operational tracking tools and communicated results to support daily decision-making.
