PROFESSIONAL SUMMARY

Computer Science student at the University of Washington Tacoma with hands-on Java, JavaScript, web API development, and SQL data analysis experience. Strong foundation in data structures, algorithms, object-oriented design, automated testing, and debugging, with practical leadership and analytical experience from a long-term management role.

EDUCATION

University of Washington Tacoma B.A. Computer Science & Systems | Expected Spring 2027
Relevant Coursework: Java, Object-Oriented Programming, Data Structures & Algorithms, Software Design, Database Systems Design, Game & Simulation Design.

SKILLS

Languages: Java, C++, JavaScript, Python, SQL, HTML/CSS
Tools: Git/GitHub, YouTrack
Concepts: Object-Oriented Design, Data Structures, Algorithms, API Integration, Relational Databases, Data Cleaning & Analysis, Automated Testing, Debugging

PROJECTS

Full-Stack Expression Calculator Java, JavaScript, HTTP | AI-assisted development
- Built a browser interface and Java HTTP server with input validation, operator precedence, and division-by-zero handling; implemented custom lists, queues, and stacks for infix-to-postfix evaluation with automated tests. Personally reviewed and validated AI-assisted implementation.

Battleship C++
- Built a console game with a custom array list for fleets and circular queue for CPU targeting; added guided placement, side-by-side boards, sinking scores, and automated tests.

Craps Game Java, Java Swing
- Developed randomized dice logic, balance tracking, and input validation; separated game rules from the interface using object-oriented design and automated model tests.

Pig Game Java, Java Swing
- Built a dice game with graphical and console interfaces, CPU gameplay, roll-or-hold scoring, animated dice, and sound effects.

EXPERIENCE

Global Career Accelerator 2026 - Present
Data Analytics Trainee | Project-based training in SQL and Python

- Joined device and environmental-impact data in an Intel-themed sustainability project; grouped devices by age, type, and region to quantify potential energy and CO2 savings from repurposing.
- Analyzed GameJet user and transaction data using joins, CASE-based spending segments, and time-to-first-purchase calculations to examine conversion gaps and revenue patterns.
- Combined FastKitchen customer and order records to calculate average order value, total spending, and order distribution by location for marketing and operations recommendations.
- Used subqueries and joins to compare construction job demand with weather events by region and week; interpreted seasonal patterns and potential workforce-planning implications.
- Cleaned mixed-type revenue data in Python using loops and type conversion; calculated monthly totals and averages. Used dictionaries and conditional logic to analyze enrollment and conference metrics across 130+ NCAA Division I universities.
- Analyzed NBA performance data from 2004-2020 using SQL grouping, filters, and conditional logic to compare scoring, three-point shooting, and home-court patterns; summarized 6,295 London transit records by zone and travel period.
- Ranked YouTube engagement using ORDER BY, LIMIT, and OFFSET; filtered and ranked Crunchbase funding data to compare company status, funding levels, and industry trends.

Assistant Manager Mar 2019 - Present
1915 KC House SeaTac, WA

- Analyze labor, sales, and operational data while supporting a team of more than 20 employees.
- Optimized reporting spreadsheets, reducing recurring reporting time by approximately 50%; developed tracking tools and communicated results to support daily decisions.
