PROFESSIONAL SUMMARY

Computer Science student at the University of Washington Tacoma with hands-on Java development experience and a strong foundation in data structures, algorithms, and object-oriented design. Brings practical leadership and analytical skills from a long-term management role, with a track record of building systems and solving problems under real-world constraints.

EDUCATION

University of Washington Tacoma

B.A. Computer Science & Systems.

Expected 2026

Relevant Coursework: Data Structures, Algorithms, Object-Oriented Programming, Software Design

SKILLS

Languages: Java

Tools: IntelliJ IDEA, GitHub, Java Swing (GUI)

Concepts: Object-Oriented Programming, Data Structures, Algorithms, Abstraction, Generics, Complexity Analysis, Debugging, File I/O

Professional: Leadership, Team Collaboration, Analytical Problem Solving, Adaptability

PROJECTS

Craps Game

Java

- Built a casino-style craps game in Java featuring randomized dice logic, balance tracking, and input validation, with a graphical user interface implemented using Java Swing rather than command-line input.
- Designed and structured the application using object-oriented principles, gaining hands-on experience with GUI APIs and laying groundwork for understanding broader API-driven development.

Data Structures and Implementations Coursework

Java

- Implemented stacks, queues, arrays, recursive trees, and sorting algorithms in Java.
- Applied abstraction, interfaces, generic classes, and complexity analysis to evaluate efficient implementations.

ICPC Regional Programming Competition

Team Participant

- Collaborated in a 3-person team to solve timed algorithmic programming problems under strict contest constraints.

EXPERIENCE

Assistant Manager

Mar 2019 – Present

1915 KC House

SeaTac, WA

- Analyzed labor, sales, and operational data to support daily decision-making across a team of 20+ employees.
- Optimized outdated spreadsheet systems using formulas and automated tracking methods, cutting reporting time by 50% and freeing capacity for higher-priority operational tasks.
- Developed operational tracking spreadsheets to support daily scheduling and reporting.
